Order Optimizer achieves Preliminary ARRA 2011 Certification for Hospitals

Houston, Texas, January 4, 2010

Order Optimizer, a leading provider of inpatient CPOE, Decision Support, and Evidence-Based Protocols, is the first inpatient system certified by CCHIT® as meeting the proposed Federal standards supporting the Meaningful Use Objectives for Computerized Physician Order Entry (CPOE) and Decision Support for hospitals, as published by the Office of the National Coordinator's (ONC/HHS) advisory committee. Preliminary certification was developed to allow eligible hospitals to qualify in time for incentive funding under the American Recovery and Reinvestment Act (ARRA).

Order Optimizer v. 3.01 has been inspected by the Certification Commission for Health Information Technology and is Preliminary ARRA 2011 certified to meet the proposed Federal standards supporting the achievement of twelve of twenty-four 2011 Meaningful Use Objectives for hospitals under ARRA. Complete information is available at <http://www.cchit.org/products/2011/arrahospital/1540>.

"We believe that this CCHIT milestone solidifies our position as frontrunners in the fast changing landscape of government-inspired healthcare overhaul," states Order Optimizer President, Robert Weathersby. "Being first to certify in these key clinical areas means hospital systems can feel safe in choosing Order Optimizer to meet the high bar set by the ONC. When coupled with our seven week implementation, unique maintenance free merged evidence-based protocols, and award-winning SaaS technology, we represent a high-impact, low risk alternative to traditional enterprise CPOE. "

About Order Optimizer
